Figure 1 shows a schematic representation of a 1000-bp DNA fragment. The fragment is flanked by BamHI sites. The fragment contains several restriction sites: XbaI, PstI, KpnI, SmaI, and BamHI. The fragment is labeled with '1000 bp' and 'BamHI'.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups.

Figure 1. The proposed model of the effect of the social support on the relationship between the perceived stress and the self-rated health. The model is based on the findings of the previous studies (see text for details).

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses in all conditions. Error bars represent the standard error of the mean.

[illegible]

Figure 1: Schematic representation of the experimental design. The figure is divided into two main sections: 'Pretest' and 'Main Experiment'. The 'Pretest' section shows a sequence of steps: 'Pretest 1' (with 'Pretest 1a' and 'Pretest 1b' sub-steps), 'Pretest 2', and 'Pretest 3'. The 'Main Experiment' section shows a sequence of steps: 'Main Experiment 1', 'Main Experiment 2', and 'Main Experiment 3'. Each step in the 'Main Experiment' section is associated with a specific condition or treatment, indicated by colored boxes (blue, green, yellow, red). The 'Pretest' section is used to establish baseline measures, while the 'Main Experiment' section is used to test the effects of the intervention.
